	Original assumptions			Widened assumptions		
Node	L (min)	U (min)	Decision	L (min)	U (min)	Decision
A	5	8	definite access	3	12	unresolved
B	18	25	definite exclusion	8	30	unresolved
C	7	11	unresolved	4	17	unresolved
D	4	∞	unresolved	2	∞	unresolved
E	∞	∞	definite exclusion	∞	∞	definite exclusion
Clinic	0	0	definite access	0	0	definite access

Shortest time to Clinic: L lower, U upper. Threshold $\tau = 10\,\text{min}$: access if $U \le \tau$, exclusion if $L > \tau$.
